

# **Streamlining Ticket Assignment for Efficient Support Operations**

**Team Id :NM2025TMID13946**

**Team Members: 4**

**Team Leader:**KANNAN M

**Team Member 1:THAMIZHARASAN S**

**Team Member 2:ESWAR S**

**Team Member 3:SURYA R**

## **Problem Statement:**

ABC Corporation currently experiences delays in resolving support tickets due to manual assignment processes. Tickets are often routed incorrectly or take longer to reach the appropriate teams, leading to inefficient use of resources and reduced customer satisfaction. This creates a need for an automated system that can assign tickets accurately and efficiently.

## **Objective:**

The objective of this initiative is to implement an automated system for ticket routing at ABC Corporation, aimed at improving operational efficiency by accurately assigning support tickets to the appropriate teams. This solution aims to reduce delays in issue resolution, enhance customer satisfaction, and optimize resource utilization within the support department.

## **Skills:**

Tensorflow, Spring

## **TASK INITIATION**

Milestone 1 : Users

## Activity 1: Create Users

### Steps:

- 1) Open **ServiceNow** and log in.
- 2) Navigate to **All** → **System Security** → **Users**.
- 3) Click **New** to create a user.
- 4) Fill in the required details for the first user.
- 5) Click **Submit** to save the user account.
- 6) Repeat steps 3–5 to create a second user with the specified details

Using the steps above, two users were successfully created:  
**Manne Niranjan** and **Katherine pierce**.

This screenshot shows the 'User' form in ServiceNow for a new record. The form is titled 'User' and 'New record'. A blue banner at the top states: 'To set up the User's password, save the record and then click Set Password.' The form fields are as follows:

- User ID: manne.niranjan
- First name: Manne
- Last name: Niranjan
- Title: (empty)
- Department: (empty)
- Email: niranjanreddymanne2507@gmail.com
- Language: -- None --
- Calendar integration: Outlook
- Time zone: System (America/Los\_Angeles)
- Date format: System (yyyy-MM-dd)
- Business phone: (empty)
- Mobile phone: (empty)
- Photo: Click to add...
- Password needs reset: ☐
- Locked out: ☐
- Active: ☒
- Web service access only: ☐
- Internal Integration User: ☐

This screenshot shows the 'User' form in ServiceNow for a new record. The form is titled 'User' and 'New record'. A blue banner at the top states: 'To set up the User's password, save the record and then click Set Password.' The form fields are as follows:

- User ID: katherine.pierce
- First name: Katherine
- Last name: Pierce
- Title: (empty)
- Department: (empty)
- Email: (empty)
- Language: -- None --
- Calendar integration: Outlook
- Time zone: System (America/Los\_Angeles)
- Date format: System (yyyy-MM-dd)
- Business phone: (empty)
- Mobile phone: (empty)
- Photo: Click to add...
- Password needs reset: ☐
- Locked out: ☐
- Active: ☒
- Web service access only: ☐
- Internal Integration User: ☐

## Milestone 2 : Groups

### Activity 1: Create Groups

### Steps:

- 1) Open **ServiceNow** and log in.
- 2) Navigate to **All** → **System Security** → **Groups**.

- 3) Click **New** to create a group.
- 4) Fill in the required details for the first group.
- 5) Click **Submit** to save the group.
- 6) Repeat steps 3–5 to create a second group with the specified details.

Using the steps above, two groups were successfully created:  
**platform** and **Certificates**

This screenshot shows the 'New record' form for a group. The form is titled 'Group New record' and includes a 'Submit' button. The fields are as follows:

- Name:** certificates
- Group email:** (empty field with a checkmark icon)
- Manager:** Katherine Pierce (with a search icon and a '0' icon)
- Parent:** (empty field with a search icon)
- Description:** (empty text area)

A 'Submit' button is located at the bottom left of the form.

This screenshot shows the 'New record' form for a group. The form is titled 'Group New record' and includes a 'Submit' button. The fields are as follows:

- Name:** Platform
- Group email:** (empty field with a checkmark icon)
- Manager:** Manne Niranjana (with a search icon and a '0' icon)
- Parent:** (empty field with a search icon)
- Description:** (empty text area)

A 'Submit' button is located at the bottom left of the form.

## Milestone 3 : Roles

### Activity 1: Create Roles

#### Steps:

- 1) Open **ServiceNow** and log in.
- 2) Navigate to **All** → **System Security** → **Roles**.
- 3) Click **New** to create a role.
- 4) Fill in the required details for the first role.

- 5) Click **Submit** to save the role.
- 6) Repeat steps 3–5 to create a second role with the specified details.

Using the steps above, two roles were successfully created:  
**Certificate\_role** and **Platform\_Role**.

The image displays two screenshots of the ServiceNow Role configuration interface.

The top screenshot shows the 'New record' form for a role named 'Certificate\_role'. The form includes the following fields and options:

- Name:** Certificate\_role
- Application:** Global
- Elevated privilege:** ☐
- Description:** Can deal with Certificate Issue

A 'Submit' button is visible at the bottom left of the form.

The bottom screenshot shows the 'Platform\_role' record. The form includes the following fields and options:

- Name:** Platform\_role
- Application:** Global
- Elevated privilege:** ☐
- Description:** Can deal with Platform Issues

Buttons for 'Update' and 'Delete' are visible at the bottom left of the form.

## Milestone 4 : Table

### Activity 1: Create Table

#### Steps:

- 1) Open **ServiceNow** and log in.
- 2) Navigate to **All** → **System Definition** → **Tables**.
- 3) Click **New** to create a table.
- 4) Fill in the following details:
  - a) **Label:** Operations related

b) Check the boxes **Create module** and **Create mobile module**

c) **New menu name:** Operations related

A table is a collection of records in the database. Each record corresponds to a row in a table, and each field on a record corresponds to a column on that table. Applications use tables and records to manage data and processes. [More Info](#)

\* Label: Operations related

\* Name: u\_st\_operations\_related

Application: Global

Remote Table: ☒

Create module: ☒

Create mobile module: ☒

Add module to menu: -- Create new --

New menu name: Operations related

5) Under table columns give the columns

Column label	Type	Reference	Max length	Default value	Display
Created	Date/Time	(empty)	40		false
Ticket Raised Date	Date/Time	(empty)	40		false
Updated	Date/Time	(empty)	40		false
Assigned by user	Reference	User	32		false
Name	String	(empty)	40		false
Priority	String	(empty)	40		false
Comment	String	(empty)	40		false
Updates	Integer	(empty)	40		false
Issue	Choice	(empty)	40		false
Sys ID	Sys ID (GUID)	(empty)	32		false
Assigned by Group	Reference	Group	32		false
Service Request No	String	(empty)	40		false
Updated By	String	(empty)	40		false
Created By	String	(empty)	40		false
Insert a new row...					

6) Click **Submit** to save the table.

7) Create choices for the issue filed by using form design

Choices are

- unable to login to platform
- 404 error
- regarding certificates
- regarding user expired

## **Milestone 7 : Flow**

**Activity 1 :** Create a Flow to Assign operations ticket to Certificate group

### **Steps:**

- 1)Open service now.
- 2)Click on All >> search for Flow Designer
- 3)Click on Flow Designer under Process Automation.
- 4)After opening Flow Designer Click on new and select Flow.

- 5) Under Flow properties Give Flow Name as “ Regarding Certificate”.
- 6) should be Global.
- 7) Select Run user as “ System user ” from that choice.
- 8) Click on Submit.

### Let's get the details for your flow

Build flow

- 9)Click on Add a trigger
- 10)Select the trigger in that Search for “create or update a record” and select that.

11) Give the table name as “ Operations related ”.

12) Give the Condition as

Field : issue

Operator : is

Value : Unable to login to platform

Click on New Criteria

Field : issue

Operator : is

Value : 404 Error

Click on New Criteria

Field : issue

Operator : is

Value : Regrading User expired

13) After that click on Done.

The screenshot shows a workflow configuration window. At the top, the title bar reads "Operations related Created or Updated where (Issue is unable to login to platform; Issue is 404 error; Issue is regarding user expired)". Below this, the "Trigger" is set to "Created or Updated". The table selected is "Operations related [u\_st\_operati...". The conditions are defined as follows:

- Condition 1: "Issue" is "unable to login to platform".
- Condition 2: "Issue" is "404 error".
- Condition 3: "Issue" is "regarding user expired".

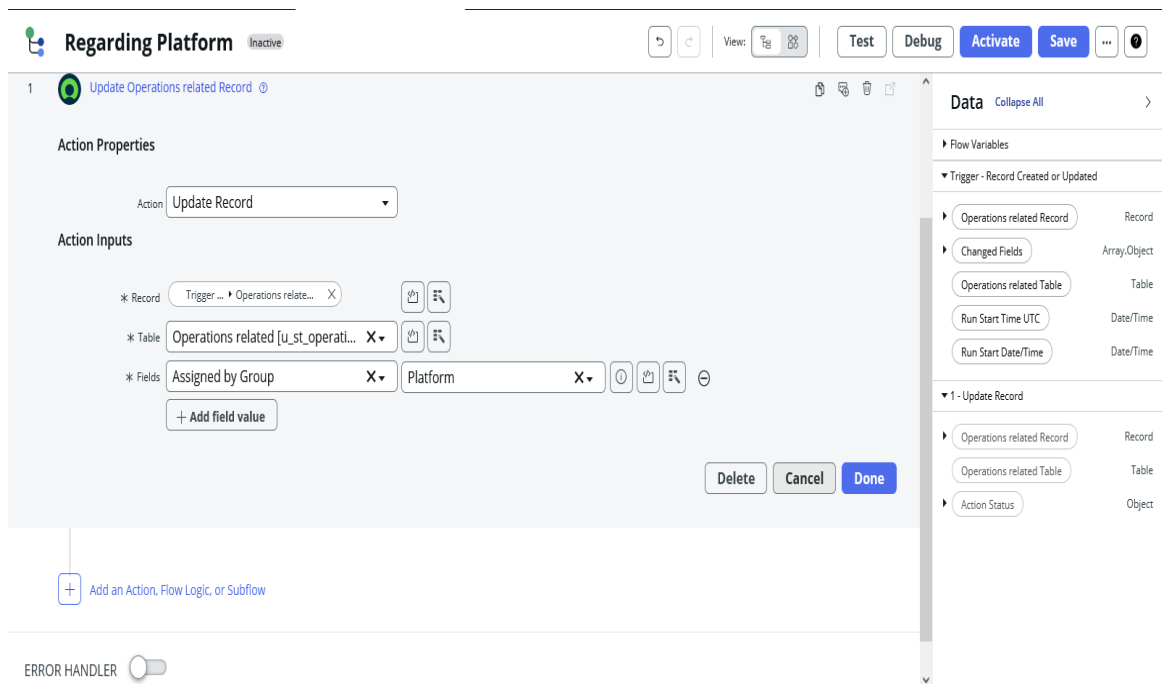

The conditions are connected by "OR" operators. Below the conditions, there is a "New Criteria" button. At the bottom, the "Run Trigger" is set to "For every update". There is an "Advanced Options" dropdown and buttons for "Delete", "Cancel", and "Done".

14) Now under Actions.

15) Click on Add an action.

16) Select action in that search for “ Update Record ”.

- 17) In Record field drag the fields from the data navigation from left side
- 18) Table will be auto assigned after that
- 19) Give the field as “ Assigned to group ”.
- 20) Give value as “ Platform ”.
- 21) Click on Done.
- 22) Click on Save to save the Flow.
- 23) Click on Activate.

**Conclusion:**

This document outlined the end-to-end process of streamlining ticket assignment in ServiceNow for ABC Corporation. The steps covered include creating users, groups, and roles; designing a custom operations table; applying access controls; and building flows for automated ticket routing.

By following these milestones, an automated ticket assignment framework was successfully implemented. This solution eliminates manual routing, ensures tickets are directed to the correct support groups, and reduces delays in issue resolution.

**Key Outcomes:**

- Two user accounts and two groups were created to represent support teams.

- Roles were defined and assigned to manage access rights. A custom operations table was created with relevant issue categories.

- ACLs were configured to enforce role-based security.

- Automated flows were built to assign tickets to the correct groups based on issue type.
